

MASS TESTING APP

High-Volume Testing, Without High-Volume Headaches

Mass Testing is purpose-built for clinical services at scale, whether you're responding to an outbreak or running a scheduled community program. From patient registration and specimen collection to lab order creation, results tracking, and state reporting, the entire workflow runs within the Patagonia Health EHR.

Because every step lives in one system, your team spends less time switching between tools and more time focused on serving the community.

Key Features

- Lab orders and results are managed inside the same system as registration
- Events can be configured for walk-ins, appointments, or both, adapting to the needs of each community
- Rapid point-of-care and send-out lab testing are supported, giving you flexibility based on available resources.
- Post-event summary reports make it easier to document outcomes and meet state and federal reporting requirements.
