

# TELEHEALTH APP

Accessible, easy, and secure virtual patient healthcare

Offering telehealth services is a way for providers to deliver care without the client and provider being in the same physical space. This can be very beneficial during a pandemic and also for rural areas. Patagonia Health's Telehealth App is built into its Electronic Health Record which ensures seamless workflow making it easy for clinical staff to use. Additionally, it is integrated with our Communicator App (patient appointment reminder system) which simplifies communications with patients. Patients can access telehealth appointments via any computer or mobile device with internet access. The telehealth visit clinical assessment can be documented as normal in-person visits.

## Key Features

- Allows the provider to review and document the client's record, all while conducting remote or virtual care.
- Instant-access links can be copied or shared and simplifies patient engagement.
- Video can be paused during telehealth visits when necessary.
- Telehealth appointment messages (with video call link) can be easily sent from within EHR either via email or text using the Communicator App. Video screen is on the same page as the patient record allowing the provider to maintain a face-to-face visual at all times.
- Includes group telehealth capabilities

I completed an individual session and the client commented that it was very easy to use, she had no prior knowledge that the text was coming and was able to roll with it. She commented that it was easier to hear and see me than Google Meet.
