

TELEHEALTH APP

Accessible, easy, and secure virtual patient healthcare platform

Telehealth services give providers the opportunity to care for clients without being in the same physical space. Patagonia Health's HIPAA-compliant Telehealth App is built into its Electronic Health Record which ensures a seamless workflow that is easy for clinical staff to use.

Save time with direct integration functionalities that connect with your calendar, along with utilizing our Communicator App to send out invites and links. Clients can access individual and group telehealth appointments via any computer or mobile device with internet access. Our automated group notes integration with our group telehealth platform will allow for hybrid, on-site, and remote participation.

I completed an individual session and the client commented that it was very easy to use. She commented that it was easier to hear and see me than Google Meet.

Jennifer Halter
Wicomico County Health Department

Key Benefits

- Review and document the client's record during virtual sessions
- Instant-access links can be copied or shared to simplify patient engagement
- Video can be paused during telehealth visits when necessary
- Telehealth appointment messages (with video call link) easily sent via email or text using the Communicator App
- Screen share within sessions to easily complete clinical forms with your clients
- Chat functionality within sessions for increased participation in group settings
- Integrated group notes and automated group appointments with group telehealth functions
