PATIENT ID SCANNER

Patient ID Scanner Functionality for Faster Patient Check-in

Saving time for your staff and patients/clients is a constant struggle for healthcare providers. Patagonia Health's Patient ID Scanner functionality allows your registration staff to easily scan a patient's identification or insurance card, with your own scanner hardware, and have the corresponding fields be auto-populated in the Electronic Health Record (EHR).

This built-in, yet optional, functionality streamlines the check-in process. It saves staff time by reducing errors so patients get in and out more quickly, thereby improving patient satisfaction.

I feel my job has become easier with Patagonia Health... It is less time spent with the client doing paperwork rather than actually communicating with them and doing the education that is needed.

- Jen, Harford County Health Department

Key Benefits

- Reads laminated or embossed driver's licenses (with 2D barcodes on the back) and/ or medical insurance cards
- Automates data entry by auto-populating a patient's scanned information into the record, including the photo, updated insurance details, and demographic data
- Eliminates typos or other errors caused from manual input, thanks to dual-sided scanning
