

TB APP

Tuberculosis Treatment and Documentation

In the past, public health departments tracked Tuberculosis (TB) contact tracing manually, through large paper maps. To combat wasted time and effort, Patagonia Health designed and developed digital functionalities to provide relief to public health departments for the management of TB and LTBI. This feature supports multiple workflows to document the tests and treatments of TB, (including contact tracing) all in one app.

Users can chart the following:

- Epidemiological assessments
- Lab and x-ray orders and results
- Physician medication orders
- Sputum collection
- TB/LTBI contact tracing
- Patient education
- Monthly dispensing reports
- Directly Observed Therapy (DOT)
- Drug reactions
- Visit details via flow sheets

Key Benefits

- Manage the TB/LTBI episode of care in one EHR-embedded app
- Manage, record, and automatically aggregate count of Directly Observed Therapy (DOT)
- Pull other areas of the patient's chart into the TB/LTBI episode of care without duplicate entry
- View case status, TB class, case management dates, outcomes, patient education, risk factors, travel history, etc. with our case management features
